My Research Topic

During my MRes course, I plan to research the influence of Korean Pop (Kpop) within Japan.

You can find advertisements for Kpop all around Tokyo, but where is the research on this phenomenon?

Data Analysis in R

I used R to form a code line that could analyse specific groups of responses out of the thousands I could receive from an online survey. R allows me to:

- Immediately take online responses from surveys
- Input them into a well-structured database
- Select specific groups within the database
- Create graphs of my data

With this tool chain, I am well-prepared to start my research in the months to come!
